

H3 – You Don't want This

H1 Title Slide provide by the Title Class

H2 Header for Your name

yaml header property

yaml footer property

A Typical Slide

This is what a **normal slide** will look like. *Special slides* can be set using a HTML comment and class assignment. The current classes are available:

```
<!-- _class: agenda -->  
<!-- _class: blank-->  
<!-- _class: nofooter -->  
<!-- _class: multicolumn -->  
<!-- _class: chapter -->  
<!-- _class: end -->  
<!-- _class: totalpages -->  
<!-- _class: copyright -->
```

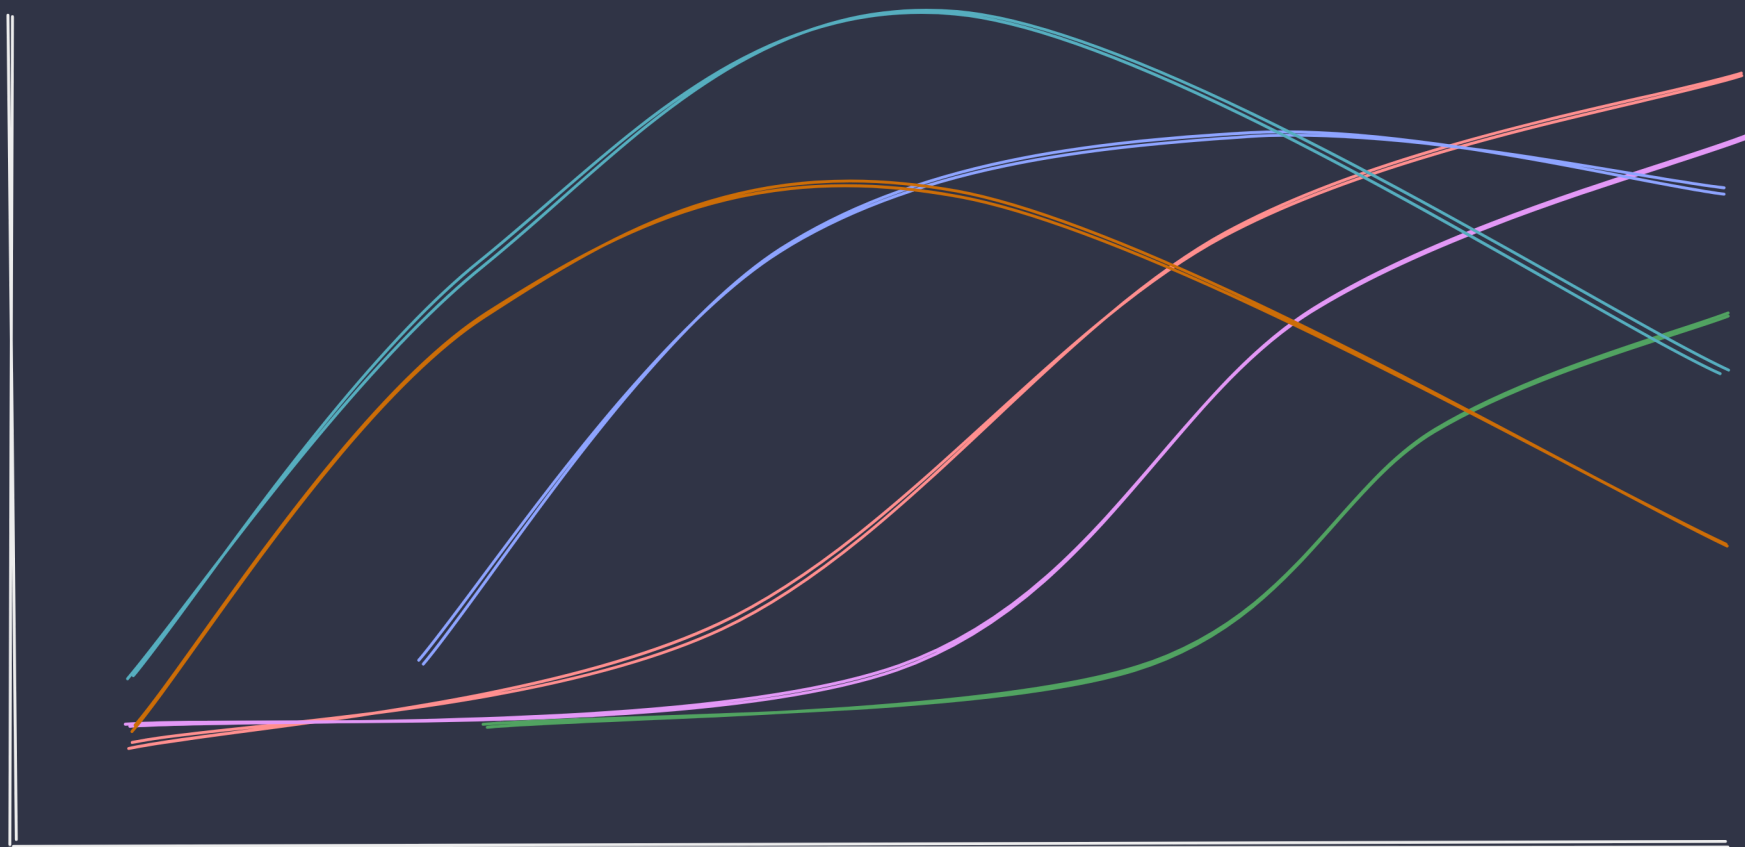

Agenda

What's the Plan?

This agenda slide does not need a H1 title unless you want a different name

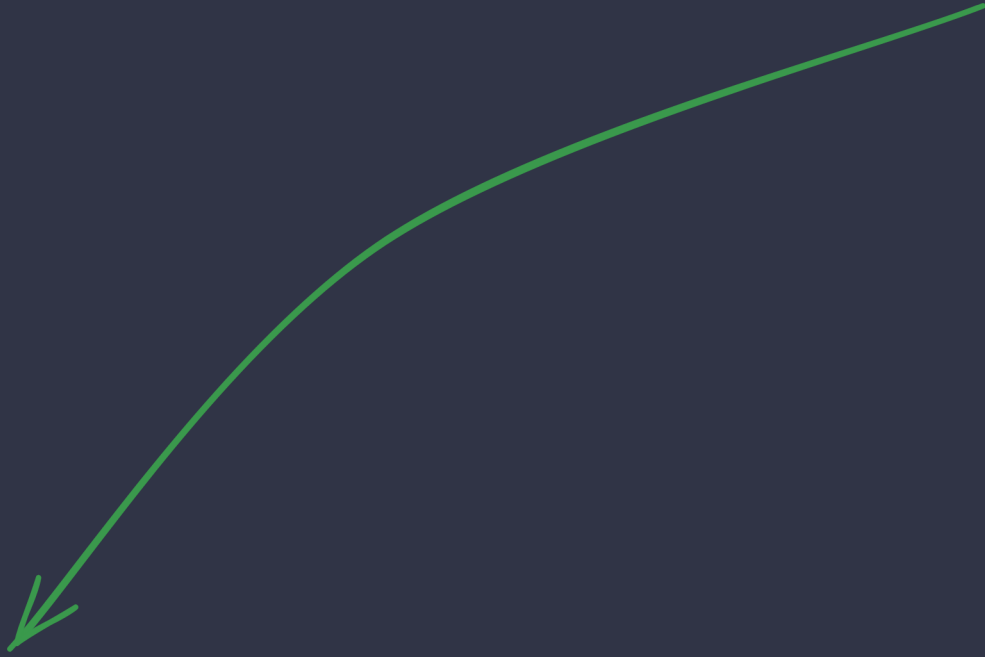

Time	Description
1pm	Introduction
2pm	Presenter 1
3pm	Presenter 2
4pm	Snacks

This is a blank slide to show off your pretty graphs but there's no way to give it a title...

That's why I Exist

Using the `nofooter` class will create a default slide without the slide number and footer text specified in the YAML frontmatter.

See!

No footer for extra space

Multicolumn Slide

Column 1 is on one line Column 2 is on a
newline

More columns can be
added for every
newline

and if you want to
space things out just
use `<br>`

Kinda Multicolumn

For partial multicolumns where you use the full slide but then need columns use the code below

```
<div class="multicolumn"><div>  
  column 1  
</div><div>  
  column 2  
</div>
```

```
<style scoped>  
  .multicolumn{  
    grid-template-columns: minmax(80%, auto) minmax(20%, auto);  
    grid-gap: 0px  
  }  
</style>
```

You can change column ratios using this CSS -

----->

This is a Nice Transition Slide

Using `class: chapter`

If you want to display the total number of slides instead of just the index, add the `totalpages` property to the slide classes.

This still needs some tweaking

If you want to move the footer to the left corner to place a copyright symbol, set the class to `copyright` and put © in the footer yaml property! You can also uncomment this in the footer section of the theme css file to create something different.

```
footer::before {  
    content: "© ";  
}  
  
footer::after {  
    content: " below author | text";  
}
```

Acknowledgements

The final slide should always be to say thanks! This slide can be set with `_class: end`. Working on improving this class.
